Software Engineering Group Coursework

SPRINT 1

Group number: **BUS26**

Student ID	Student Name
2561251	Jasmine Chapman
3057431	Romeo Eriksen
3049212	Hania Chester
2408078	Richard Pinnock
3056641	Liam Woodall

1. Planning (20%)

Conceptual model

Persona → Product Vision → User Stories → Features → Prototype → Tests

1.1 Personas

Persona Name	Role/User type	Goals	Pain Points	Related User Stories (IDs)
Anita Knapp	21-year-old final year university student	Good organisation of deadlines while avoiding burnout Manage dissertation work alongside other deadlines Visual plan that is easy to stick to Ability to track progress	Can't always manage to stick to revision plans throughout the week Often loses track of plans she has made	S1 – Create assignment card S2 – View all assignment cards
Hannah Clarke	Second-year Computer Science Student	See all assignment deadlines in one place Identify urgent deadlines quickly Add new deadlines in under one minute Avoid last-minute cramming Reduce anxiety about forgotten work	Deadlines scattered across Canvas, email, lecture slides Doesn't see workload clashes until too late Spends 15–20 minutes weekly checking multiple platforms Anxiety about missing something Productivity tools require too much setup	S3 – Sort assignments by due date S4- change colour to red when 24 hours before deadline
John Smith	Colourblind university student	Organise time and place to study Easy modification and addition of planned study time and location Visualise different slots with ease to stay organised and plan ahead	Requires textured borders for colourblind friendly analysis and accessibility	S5– Edit assignment S6 – Delete assignment S7- modify colour S10- attach study space to assignments
Sam Jones	First year English Literature student	Manage assignments alongside reading deadlines Wants clear separation between subjects in an app to track time spent per module Desire to add notes for important references/	Struggles to balance seminar preparation alongside working assignment deadlines Finds it hard to keep track of references and library book locations needed for coursework	S8- subject separation S9- attach library lists to assignments S11- add friend to view users' deadlines

		library book locations necessary Potential to add friends to maintain accountability of time management.	Ends up with a lot of paper notes that get lost and are hard to keep track of	S12 – add notes to keep track of to-do lists
--	--	---	---	--

Note: You need to have at least two personas. The personas should be used to justify the product vision and user stories.

1.2 Product Vision

FOR (target customer)

WHO (statement of the need or opportunity)

The (**PRODUCT NAME**) is a (product category)

THAT (key benefit, compelling reason to buy)

UNLIKE (primary competitive alternative)

OUR PRODUCT (statement of primary differentiation)

FOR university students preparing for exams

WHO need a tool for organising revision and meeting exam deadlines

THE Stacked Deck IS A digital exam planning and revision management platform

THAT provides clear, card-based organisation of revision sessions and visualisation of exam deadlines with task breakdowns and visual progress tracking

UNLIKE generic calendar apps or basic to-do list tools like Google Calendar or To-do list

OUR PRODUCT is designed by students, for students with exam-specific planning and an intuitive card system which minimises distraction while emphasising organisation.

Note: This product vision should be derived from the defined personas and guides backlog prioritisation and design decisions.

1.3 Meeting Logs (Appendix)

2. Story Writing (20%)

2.1 Product Backlog and User Stories

Story ID	Feature (epics)	Story Title	User Story	Acceptance Criteria	Priority	Justification of prioritisation /Trade-off	Story Owner
S1 SPRINT 1	Assignment management	Create assignment card	As a university student I want to create an assignment card with a title, due date and description So that I can centralise all my coursework deadlines in one place	Given I enter a title, due date and description When I click "Save" Then a new assignment card appears on my dashboard Given required fields are empty When I attempt to save Then an error message is displayed	Must	This story was prioritised as Must because it delivers the core functionality of the application. Without the ability to create assignment cards, the system cannot solve the primary persona's biggest pain point: scattered deadlines across multiple platforms. Other features such as editing, deleting, or highlighting urgent tasks were deprioritised for Sprint 2 because they depend on assignment creation functionality.	Anita
S2 SPRINT 1	Assignment management	View assignment cards	As a university student I want to see all my saved assignment cards displayed So that I can quickly understand my upcoming workload	Given I have saved assignments When I open the dashboard Then all assignment cards are visible	Must		Anita
S3 SPRINT 2	Assignment triage	Sort assignments by due date	As a university student I want to be able to sort my deadlines according to their due dates, so	GIVEN multiple assignments exist, WHEN they are displayed, by default they are shown in chronological order by due	Must	The story was prioritised as must because students being able to see assignments by which is due first is crucial to the planning. However, additional filtering is a "should" rather than a must.	Hannah

			that I can prioritise my work accordingly .	date with a dropdown box for ascending or descending, THEN they should be more flexible for user readability.			
S4	Assignment colour modification	change colour to red when 24 hours before deadline	As a university student I want to see a colour change associated with deadline urgency to help me visually prioritise tasks and avoid missing key deadlines.	GIVEN that I have an upcoming deadline, WHEN the assignment is closely due to being submitted THEN I should be able to see a visual distinction in the changing of colour of that subject.	Should		Hannah
S5 SPRINT 1	Assignment modification	Edit existing assignments	As a university student I want to be able to modify my assignments in case I have made any mistakes or wish to update, so that all my assignments are presently correct.	GIVEN I have an existing assignment WHEN I wish for that assignment to be updated, THEN I should be able to have a pop up to make any modifications	Must		Joe
S6 SPRINT 2	Assignment deletion	Delete existing assignment	As a university student I want to be able to delete any assignments that have been completed or otherwise, so that I can keep	GIVEN I have an existing assignment WHEN I wish for that assignment to be deleted, THEN I should be able to press a button to delete it	Must		Joe

			only those that I want to keep around.				
S7	Colourblind support	Changing colours of text and background of the cards (colourblind awareness)	As a colourblind student I want to be able to see my assignments ordered by priority and due date in a colourblind-friendly manner, so that I may triage my work effectively.	GIVEN that I am a colourblind student, WHEN I got to look at my assignments I want to be able to view them without solely simple colour coordination, but organisation in also another manner like textured borders, THEN they will be more accessible to me.	Must		John
S8	Assignment sorting	Organise by subject	As a student with multiple modules, I want to be able to organise between the different deadlines I am working towards.	GIVEN that I have multiple modules with different assignment types to work towards, WHEN I organise my assignments THEN I should be able to sort by subject.	Must	This story was prioritised as a ‘must’ , because it was crucial to have assignment separation within the application to fulfil this persona’s main user story.	Sam
S9	Assignment attachments	attach library lists to assignments	As a student who needs to keep track of references and reading lists, I want to be able to add notes to keep track of library locations.	GIVEN that I need to keep track of the books and references I use, WHEN I need to store these THEN I want to be able to keep note of these within the application.	Could	This feature was classified as a ‘could’ priority. This is because there were other features more critical to fulfilling user stories, such as seeing deadlines and distinguishing between subjects,	Sam

S10	Assignment attachments	attach study space to assignments	As a student I want to be able to plan where to study and at what time.	GIVEN I want to be able to track where I can study and at what time, WHEN I plan to study somewhere THEN I want to be able to display and keep track of this within the application.	Could	This feature was not implemented in Sprint 1 and was prioritised as a 'could' feature. This is because there were other user stories that were more important to fulfil; this specific feature was not crucial to the functioning or user accessibility of the application.	John
S11	Added viewing users	add friend to view users' deadlines	I would like to add my friends to view their deadlines and keep me accountable for meeting my own.	GIVEN that I want to have accountability for deadlines THEN I want to be able to add my friends and view their deadlines WHEN I have upcoming tasks.	Could	This user story was prioritised as a 'could' feature and rated lower in priority when developing the app. This is because we felt there were other features more important to the user that were less complex to implement in the time we had.	Sam
S12	Adding notes/ building a to-do list	add notes to keep track of a to-do list	I would like to be able to add notes on the application to keep track of my to-do list/ keep a paper trail of the things that I'd like to complete.	GIVEN I like to make digital notes of internal thought THEN I want the option to store these notes WHEN using the application.	Should	This feature was prioritised as 'should' in Sprint 1 as there were other features that felt more crucial to the user than this one.	Sam

2.2 Sprint 1 Summary

Item	Sprint 1 (Weeks2-6) Discovery, MVP design and partial implementation	Sprint 2(Weeks7-11) Refinement, testing & evaluation
Planned stories (Plan - P)	S1, S2	
Delivered stories (Done - D)	S1, S2	
Stories not completed (No - N)	S3	
Key change planned for Sprint 2	Simplify UI	N/A

Note: Stories marked “P” or “N” should be reflected upon in Sprint learning or retrospectives.

2.3 Group contribution and Individual contribution (Appendix)

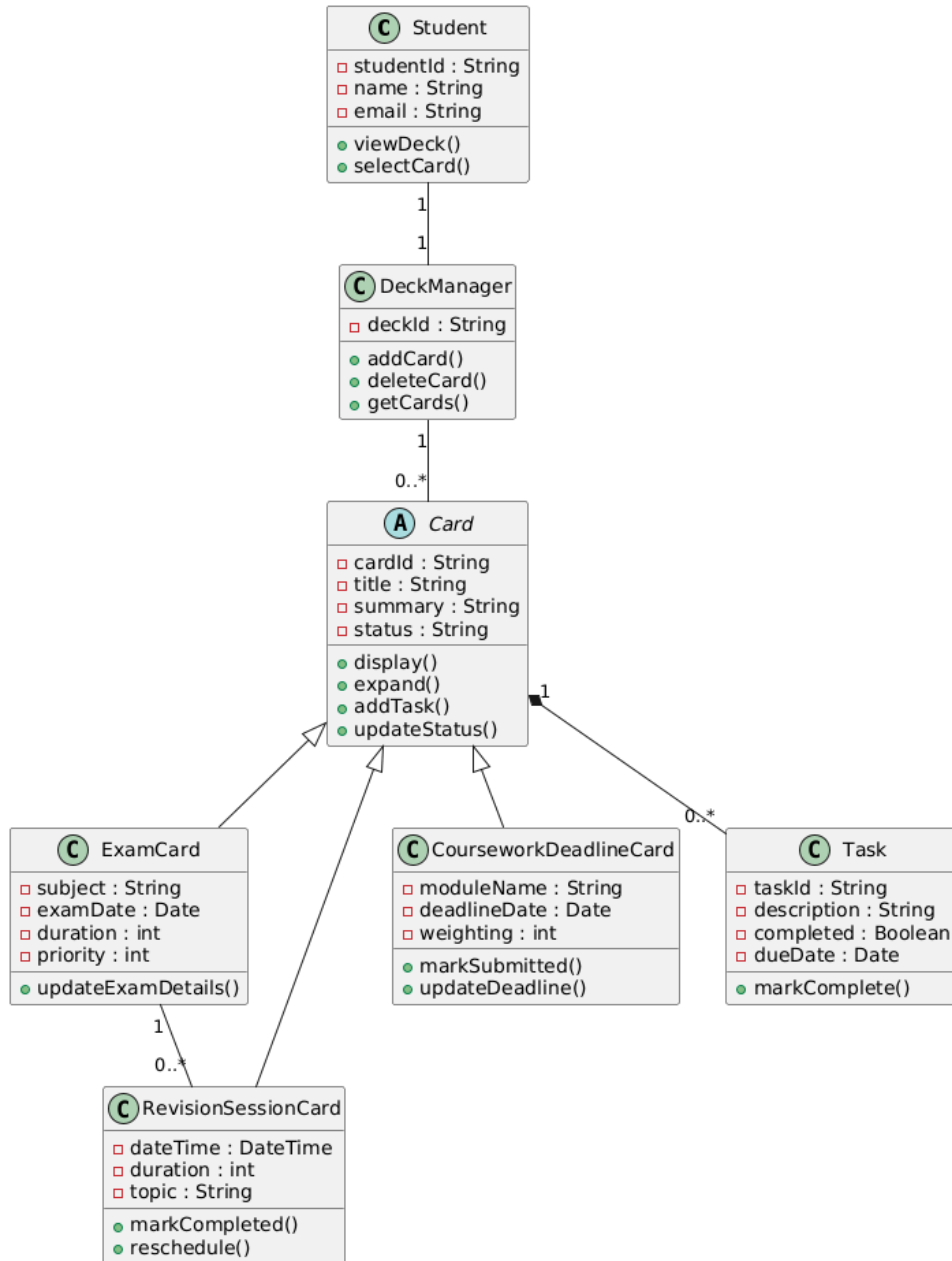

3. Design (20%)

3.1 Design Models and Evidence

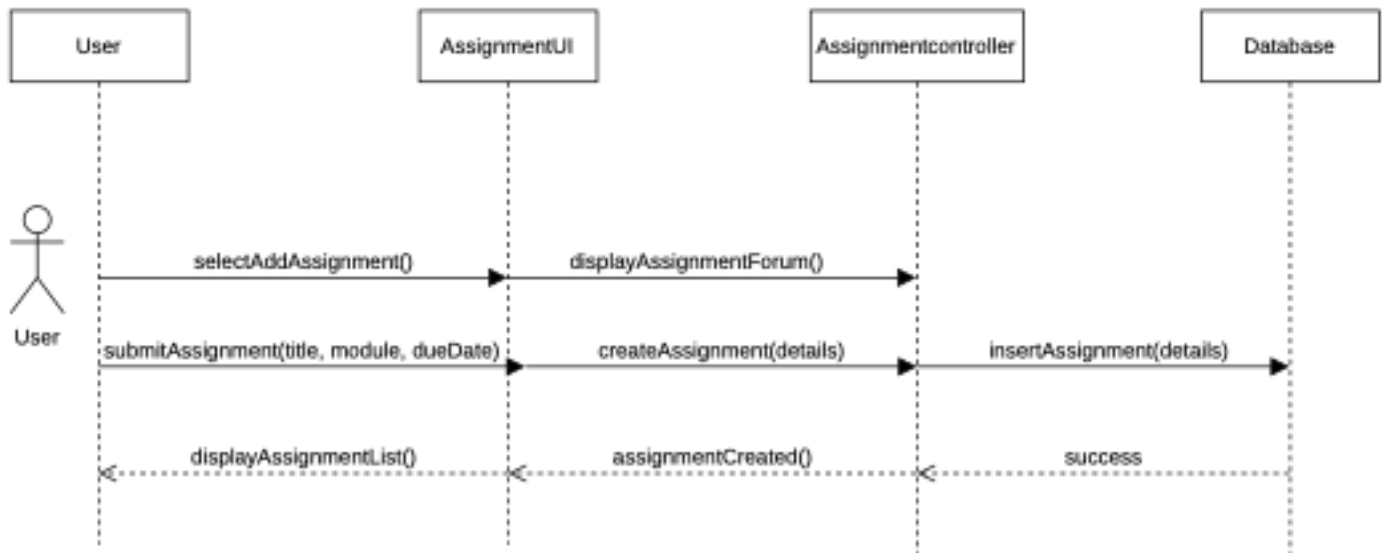

Diagram	Type (Class / Sequence)	Purpose	Related User Stories (Story IDs)	Design decision rationale
D1	Class	Domain Structure	S1, S2	Clarifies data structure
D2	Sequence		S1, S2	
D3	Sequence		S6	Basic functionality
D4	ER	Database structure	All	Basic functionality

Note: You are **not penalised** for modifying or discarding models if justified by learning.

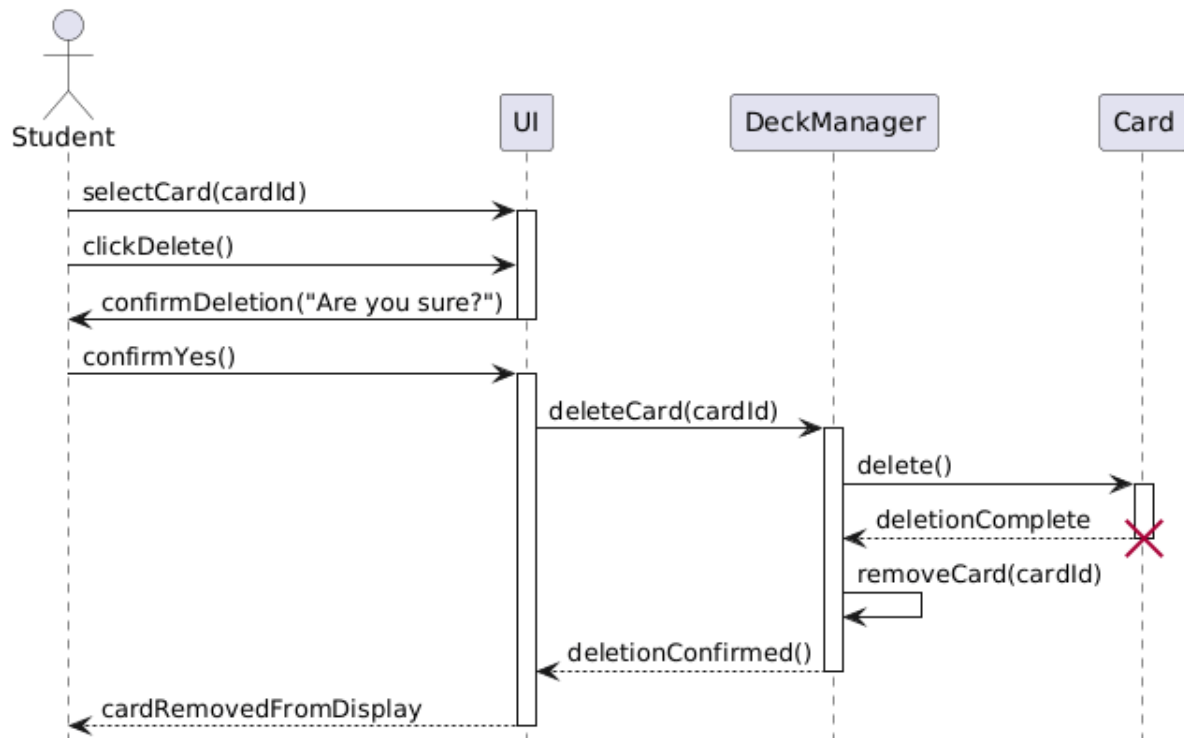

D1

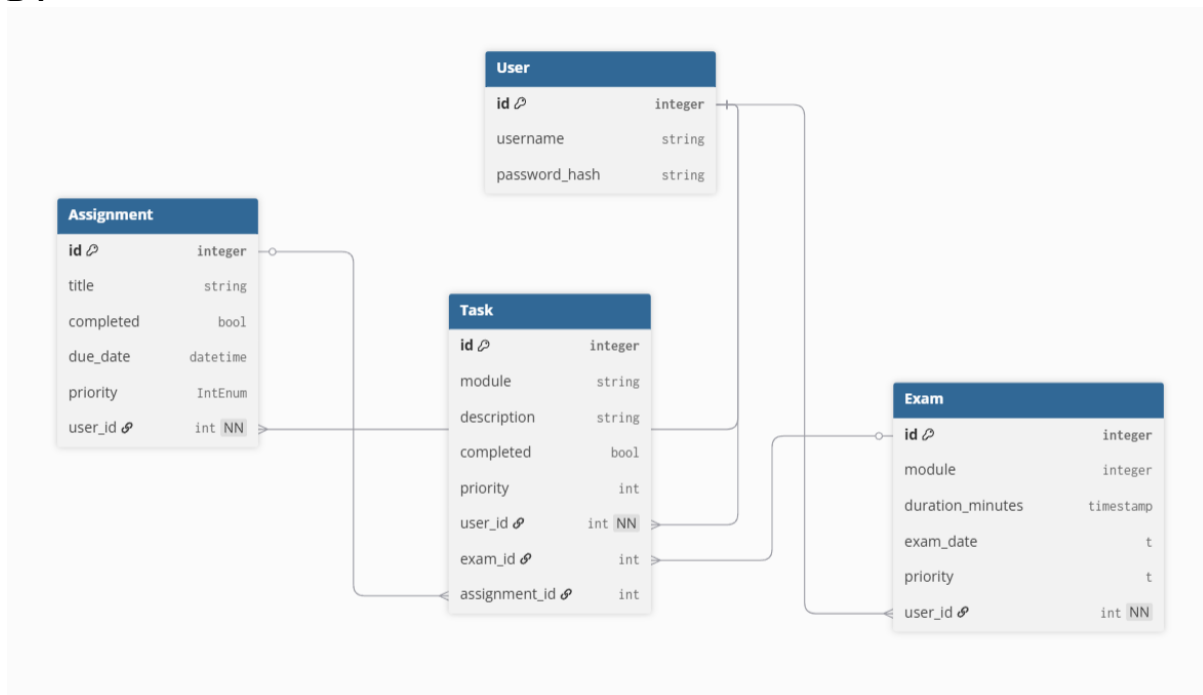

D2

D3

D4

3.2 Stories and Evidence

For each story marked as “Done” in Sprint 1 must be mapped to at least one test.

Story ID	Evidence Type (UML Diagram / Git Commit ID(s) / Test Evidence: testcases / their results)	Reference (file / commit / screenshot)	Acceptance Criteria Met (Yes / Partially / No)	Notes (if partially completed)
S1	Git commit	a3f9c2	P	Task saving works, but keyboard navigation is not fully implemented.

Note: If a story is marked “Done” without evidence, it will not be treated as complete.

4. Working Prototype and Implemented Features (20%)

Submit a **short video (3-5 minutes)** that demonstrates the implementation of 2 core end-to-end features + refinement of Sprint 1 feature. Each demonstrated feature must be traceable to user stories and acceptance criteria. The video should be submitted under the “**Product Video**” assignment on Canvas.

5. Testing and Evaluation (20%)

Story ID	Acceptance Criteria	Test Performed	Outcome (Pass / Partial / Fail)	Accessibility Checked	Notes (If partially tested)

S1	Task saved	Manual test	Pass	Keyboard only	
----	------------	-------------	------	---------------	--

Note: You may have more than one test per story. At least one test per story is required.

6. Reflection & Evaluation

6.1. Sprint One

6.2. Sprint Two

APPENDIX

A. Group Contribution

Story ID	Story Title	Predicted workload in hours	Actual workload in hours	Status (TODO/In progress / DONE)	Owner name
S1	Create assignment card			Done	
S2	View assignment card			Done	
S3	Sort assignment card by date				
S5	Assignment modification			Done	
S6	Assignment deletion				

B. Individual Contribution

Team member	Role (s)	Stories Owned	Evidence (Git / Diagram / Test)	What could have been improved with more time?
Liam				
Richard				
Hania				
Jasmine				
Romeo				

C. Meeting Logs

You are required to schedule at least 2 meetings with your Customer (TA).

--

Meeting ID	Team attendees	Customer (TA's name)	When	Agenda items	Actions and Owner
M1	Richard Pinnock, Hania Chester, Jasmine Chapman, Liam Woodall, Romeo Eriksen	Krzysztof Kampinowski	11/02/2026	> Discuss potential persona ideas > Clarify contribution aims. > Introduce initial application ideas	
M2	Richard Pinnock, Hania Chester, Jasmine Chapman, Liam Woodall, Romeo Eriksen	Krzysztof Kampinowski	25/02/2026	> Discuss V1 of product and areas for improvement > Gain consumer feedback on product vision and execution > Discuss User Story implementation within V1	TA did not show during requested meeting time – meeting was rescheduled with an email follow up
M3	Richard Pinnock, Hania Chester, Jasmine Chapman, Liam Woodall, Romeo Eriksen	Krzysztof Kampinowski	27/02/2026	>Advised by TA: - detail acceptance criteria of user stories and to ensure clear direction from personas - add owners to user stories - create a sufficient sequence diagram	
M4	Richard Pinnock, Jasmine Chapman, Liam Woodall, Romeo Eriksen	Krzysztof Kampinowski	11/03/2026		

Meeting Diary for Team meetings				
Meeting ID	Team attendees	When	Agenda items	Actions and Owner
M1	Jasmine Chapman, Liam Woodall, Richard Pinnock (in person) Hania Chester (via Teams)	09/02/2026	> Discuss the beginnings of the project and initial application ideas. > Identify some personas and potential consumer pain points. > Set up communication channels between group members.	Create personas: Jasmine, Romeo, Hania, Richard Discuss pain points: All
M2	Liam Woodall, Hania Chester, Romeo Eriksen,	16/02/2026	> Discuss and establish personas. > Create User Stories and begin to form desired application features. > Progress product vision. > Begin implementing desired app features.	Establish personas: Richard, Hania, Romeo, Jasmine Begin to form desired application features: Romeo, Richard, Liam

	Jasmine Chapman (in person)		> Reflect on consumer desired features not possible within the Sprint 1 timeframe.	Implement desired app features: Liam Progress the product vision: Richard, Hania Class diagram creation: Richard Reflect on consumer features not possible in sprint 1: Hania, Jasmine, Romeo
M3	Liam Woodall, Romeo Eriksen, Richard Pinnock (in person) Hania Chester Jasmine Chapman (via group chat)	02/03/2026	>Add more detail to the user stories >ensure all of sprint 1 is complete: sequence diagram and acceptance criteria finished >Clear direction for sprint 2- discussing the next user stories that will be applied >New document set for Sprint 2 to recognise development	Add more and add detail to user stories: Hania, Romeo, Jasmine Sprint 1 sequence diagram: Hania Consider overall direction for sprint 2: All Clear direction for sprint 2 app features: Richard, Liam, Romeo New document set up for sprint 2: Hania
M4	Liam Woodall, Jasmine Chapman (in person) Romeo Eriksen, Richard Pinnock Hania Chester (via group chat)	09/03/2026		
M5		16/03/2026		

Note: Meeting logs are not marked directly and are used only as supporting evidence.
